

[Marius Köder at RAMS 2023 Conference in Orlando - Florida](#)

Marius Köder (Master of Advanced Systems Design), a PhD Candidate from the Institute for High Integrity Mechatronic Systems (ZMS) at Aalen University participated at the 69th Annual Reliability & Maintainability Symposium (RAMS®) in Orlando, Florida. The conference was under the theme „The digital transformation of R&M“ the conference took place between 23.01.2023 and 26.01.2023.

He presented his research results in the field of Lithium-Ion battery diagnosis at the session for Prognostics and Health Management and published the paper „Online Large Signal EIS To Predict The LFP Cell State of Health“ in the proceedings of the conference.

He says that a conference like the RAMS is a great platform to share knowledge, and learn from the presentation of all the other papers with high relevance in the area of reliability. With around 600 participants, he was able to expand his professional network, make contacts with exhibiting companies and get an insight into the important part of research work - sharing knowledge and bringing research forward. He enjoyed the world-famous conference and plans to attend more conferences in future.
