

SOFTWARE ENGINEER (w/m/d)

Are you an experienced web developer who understands the flow of information between end users, servers and remote systems? Do you care about security, stability, maintainability and scalability of your applications? Then send us your application!

DiHeSys is a successful start-up company in the innovative healthcare sector. Our goal is to give patients access to optimal prevention, diagnostics and treatment.

We develop solutions for the supply of personalized drugs, process digital health data and offer related services. We offer you the opportunity to become part of a young, growing, technically advanced company.

What you can expect from us

You work in a young, motivated team and are responsible for the software of our products in the areas of development, implementation and maintenance. You contribute your creative ideas to the development process and play an active role in shaping it.

Your tasks and responsibilities

- Design, implementation and testing of front and backend software
- Design and implementation of Secure Traffic
- Design of development plans and implementation
- Usability analysis of new features
- Development of prototype software and tools for testing new features
- Documentation of development and computer validation

Your profile

- Successful studies in the field of computer science or 5 years professional experience in software development
- Excellent knowledge with PHP, MySQL, HTML5, CSS, Javascript, NodeJs
- HL7 and FHIR desirable
- Awareness of the advantages and disadvantages of browser- and server-side technologies
- Experience in pharmaceutical environment advantageous
- Strong documentation, communication and teamwork skills
- Experience in the field of additive manufacturing desirable
