Hochschule Aalen

Develop optimized human machine interface (HMI) to ensure safe and efficient operations of Airbus Helicopters aircrafts

Zielsetzung und Ihre Aufgaben:

The aim of the research project is to analyse existing online documentation and state of the art technology and theories to develop an optimized HMI concept for the existing online browser. This analysis shall be supported by a study with real users of the documentation. As a result a clear concept with rules has to be provided as a basis for the software development. The overall aim is to increase efficiency and safety by using the documentation.
